

# A smart upgrade.

To keep up with the speed of change, we are continuously vetting and investing in new technologies that enhance infrastructure and benefit customers. Our latest improvement: advanced meters with two-way communication. These meters will allow us to resolve potential issues more quickly. Customers will be able to access real-time energy use information and make changes to reduce bills.

Better service. Faster response times. More opportunities to save.  
**It's all part of delivering a bright future.**
