Energy
Delivering a Bright Future

Safe streets. Clear skies. Bright future.

Since 2018, NorthWestern Energy has installed nearly 80,000 new LED street and yard lights throughout the Big Sky state to provide safe and reliable lighting for our communities. These energy-efficient light sources create a warm, focused beam to illuminate streets while eliminating unnecessary light pollution that blocks Montana's majestic mountain skies. We're proud to say that nearly 100% of the replaced lights were recycled to ensure a cleaner and brighter future for all customers.
